

BLUE GLOVE TREATMENT – COVID-19 POLICY

At ShalePhoto^{RE}, protecting homeowner and real estate agents' health while providing quality imaging services is our top priority.

In order to prevent the spread of COVID-19, your ShalePhoto representative will limit touching objects inside the home to only necessary surfaces which may include, but is not limited to: doorknobs, blinds, light switches, and doors. Any surface that has been touched will be cleaned with appropriate cleaner at the conclusion of imaging. The photographer will wear gloves when in the property and will wear shoes dedicated exclusively to use during imaging inside homes. Shoes will be cleaned before and after being worn with an appropriate cleaner. Our representative will wear a reusable, cloth facemask that is machine washed prior to use in each home. Matterport and photo equipment will be cleaned with appropriate cleaner before and after imaging.

Our "Blue Glove Treatment" commitment to your health guarantees that your photographer will:

- Wear a clean, reusable cloth mask and gloves at all times while in the home.
- Wear shoes dedicated to only the interior of the home.
- Disinfect all equipment, shoes, and mask prior to arrival and before departing the property.
- Disinfect all surfaces touched during the session.

As a measure to minimize contact in the property your photographer will not:

- Move furniture
- Fluff or move pillows
- Adjust bedding
- Declutter
- Fold towels or reposition toiletries
- Remove personal items from shelves, refrigerator, or walls
- Touch anything unless absolutely necessary.

* The booking agent will be responsible for being sure these standards for cleanliness are met for their clients at the end of each imaging session.
